“The Future of the Crisis”

The essay analyses present Eurogroup States finances, with emphasis on Greece; explains why present measures to circumvent the crisis do not work and demonstrates why more and more Eurogroup countries collapse financially and how this will evolve.

It addresses further the issue of growth which is just now being accepted as a remedy with its possible formulations and how this will affect the economies of Europe and Greece.

Finally it states what can be expected in Greece for the next twelve months and the lessons of the crisis.
